Conductivity

$\sigma =$   (S/m)  Depends on Temperature

Temperature:  (K)

$$P_{\text{hyst}} = k_h \cdot f \cdot B_m^2$$

+

$$P_{\text{eddy}} = k_c \cdot f^2 \cdot B_m^2$$

+

$$P_{\text{excess}} = k_e \cdot (f \cdot B_m)^{3/2}$$

Block Label Properties - core E Arnon7

General Core Loss

Core Loss Coefficients (optional):

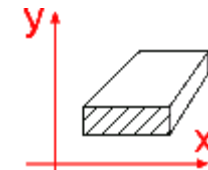

$P_{\text{core}} = P_{\text{hyst}} + P_{\text{eddy}} + P_{\text{excess}}$  (W/m<sup>3</sup>)

$K_h =$ <input type="text" value="202"/>	Hysteresis Loss:	$P_{\text{hyst}} = K_h \cdot B^2 \cdot f$
$K_e =$ <input type="text" value="0.116"/>	Eddy Curent Loss:	$P_{\text{eddy}} = K_e \cdot B^2 \cdot f^2$
$K_e =$ <input type="text" value="3.31"/>	Excess Loss:	$P_{\text{ex}} = K_e \cdot (B \cdot f)^{3/2}$

# STEP file export from SOLIDWORKS

# STEP file export from FreeCAD

# STEP file export from Solid Edge

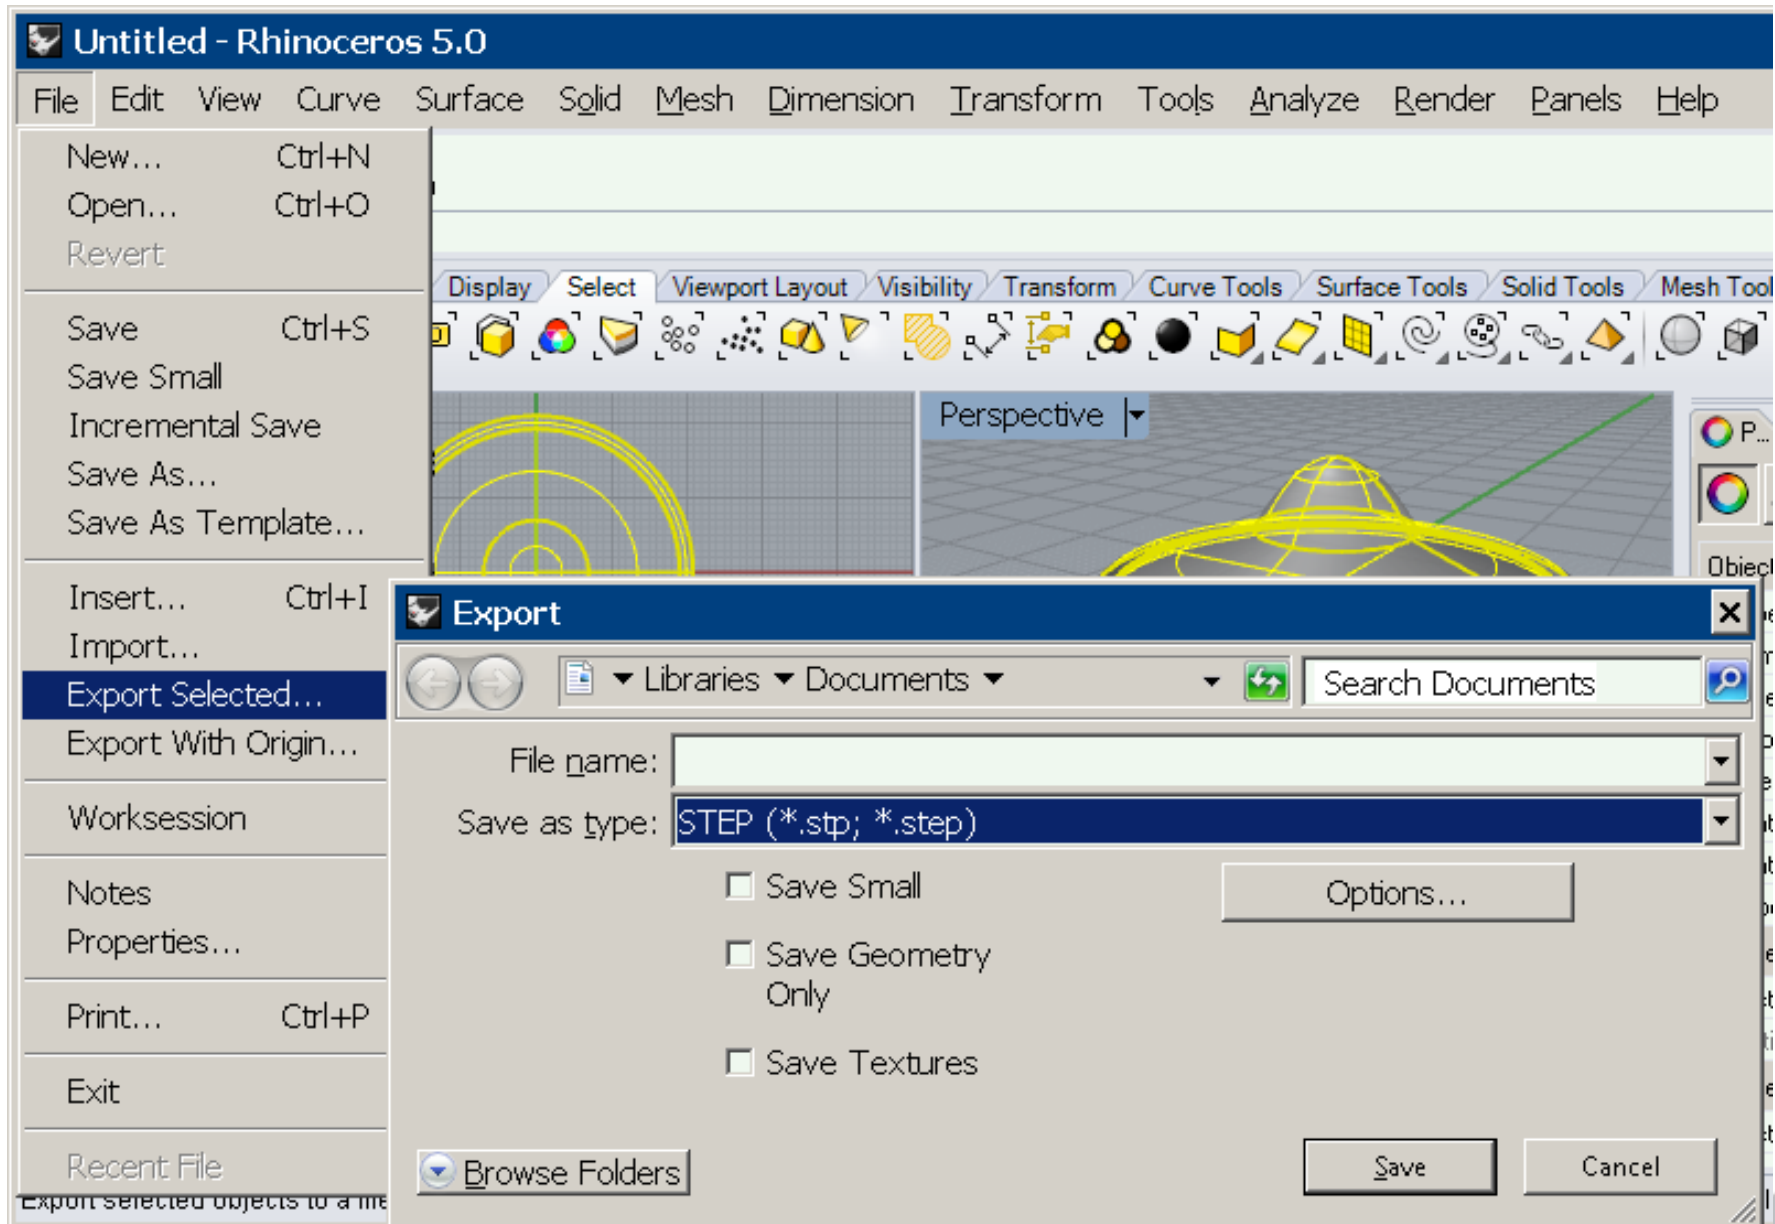

# STEP file export from AutoDesk 123D' Design

The screenshot displays the Autodesk 123D Design interface. The main window shows a 3D model of a blue insulator on a grid. The 'File' menu is open, and the 'Export as 2D...' option is selected. The 'Export As' dialog box is open, showing the following details:

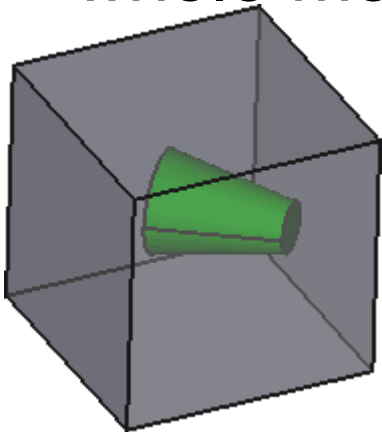

- File name: insulator
- Save as type: STEP File (\*.stp \*.step)
- Location: Computer > docs (D:)
- Buttons: Browse Folders, Save, Cancel

# STEP file export from Rhino

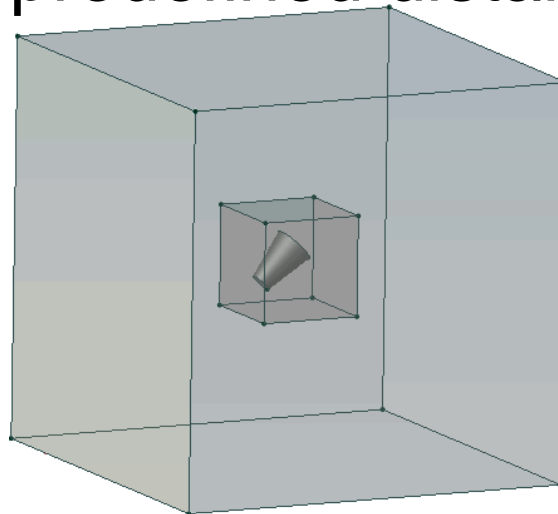

# QuickField 3D CAD Import

- Compatibility with all major free and commercial CAD packages (SOLIDWORKS, Solid Edge, FreeCAD, Rhino etc.)
- STEP file import (ISO 10303)
- One body and multiple shells
- Background region (rectangular box) enclosing the whole model at the predefined distance

**Laminated iron core losses**

**ISO 10211:2007 Thermal bridges in building construction.**

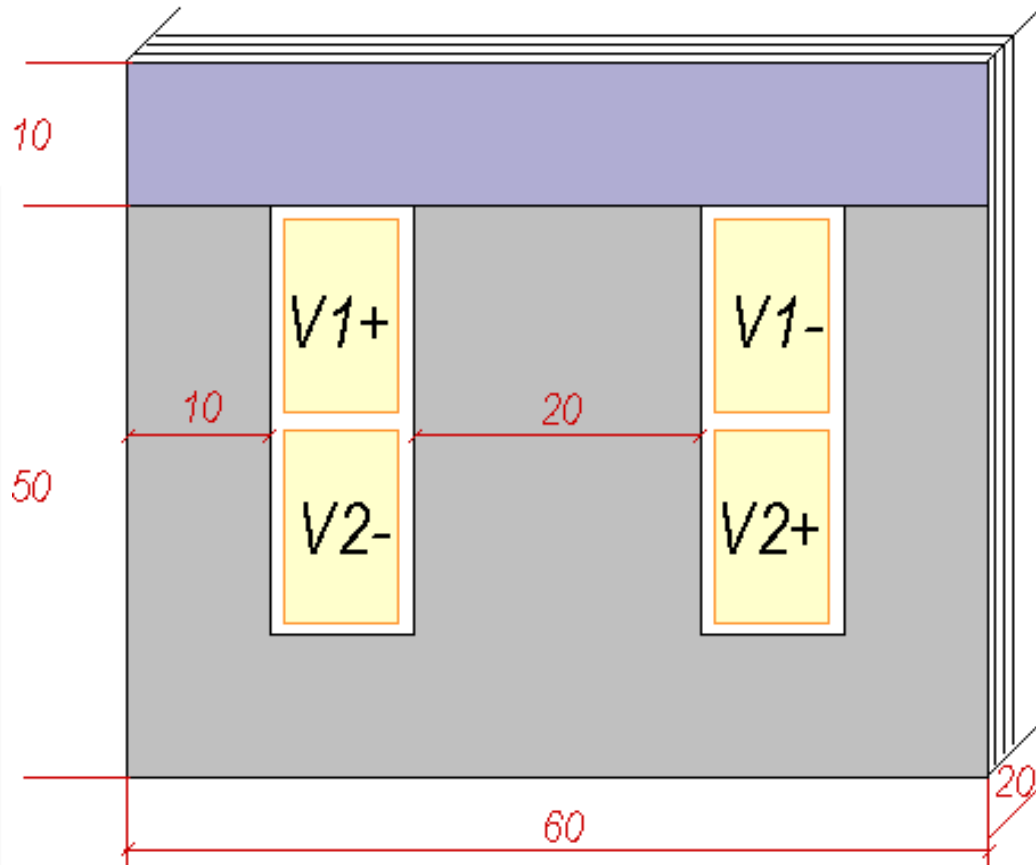

**PCB thermal analysis**

**Bent copper wire resistance**

# Laminated iron core losses

\*Core loss data and magnetization curves of Arnon™5 non-grain oriented electrical steel are provided by [Arnold Magnetics](http://arnoldmagnetics.com).

## Problem specification:

Core permeability – *nonlinear*\*

Material density  $\rho = 7650 \text{ kg/m}^3$ ,

Frequency  $f = 400 \text{ Hz}$ .

Winding 1 (primary):

no-load current 16.5 mA,

number of turns 324,

average turn length 111 mm.

conductor cross-section  $0.19 \text{ mm}^2$

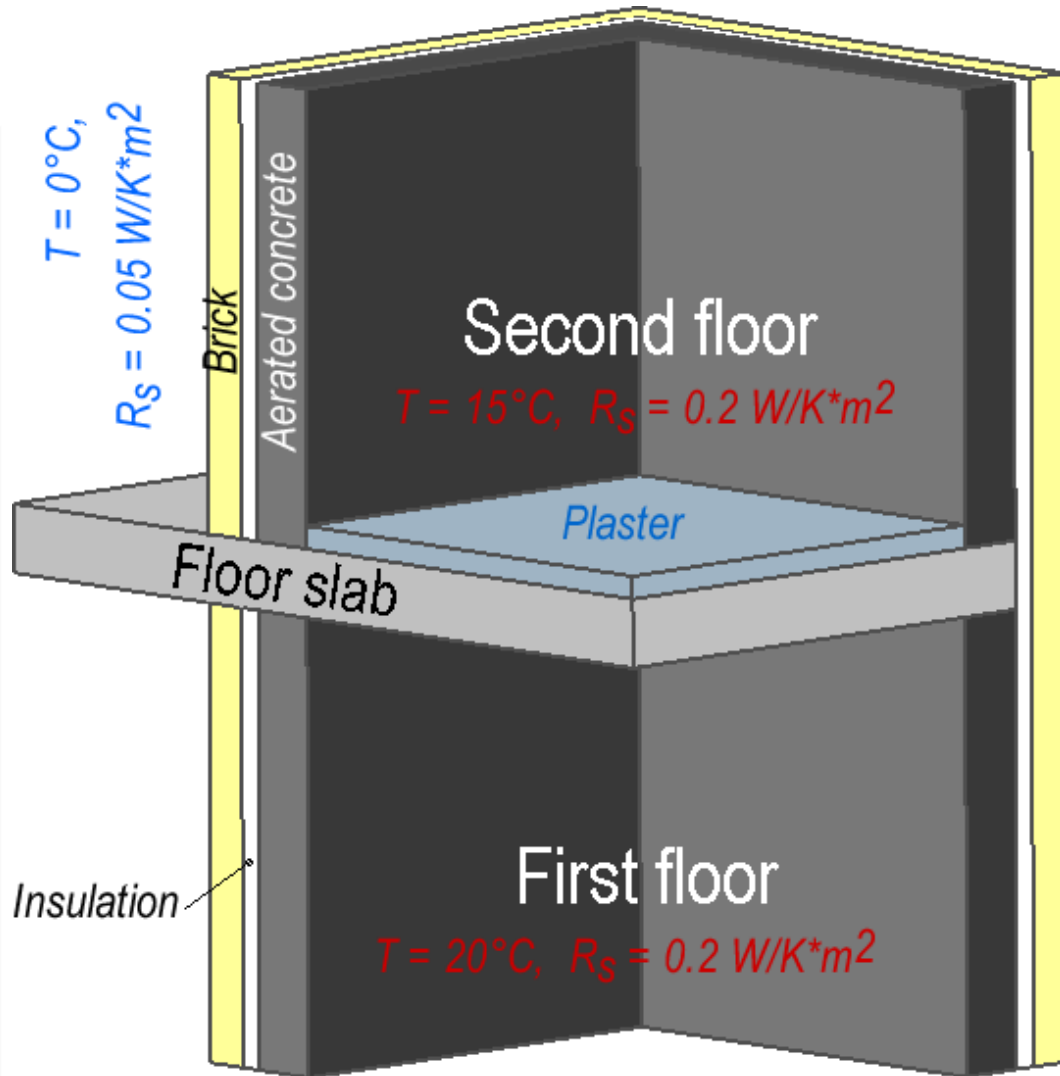

## Task:

Calculate the core losses in the no-load mode of transformer..

# ISO 10211:2007

## Thermal bridges in building construction

### Problem specification:

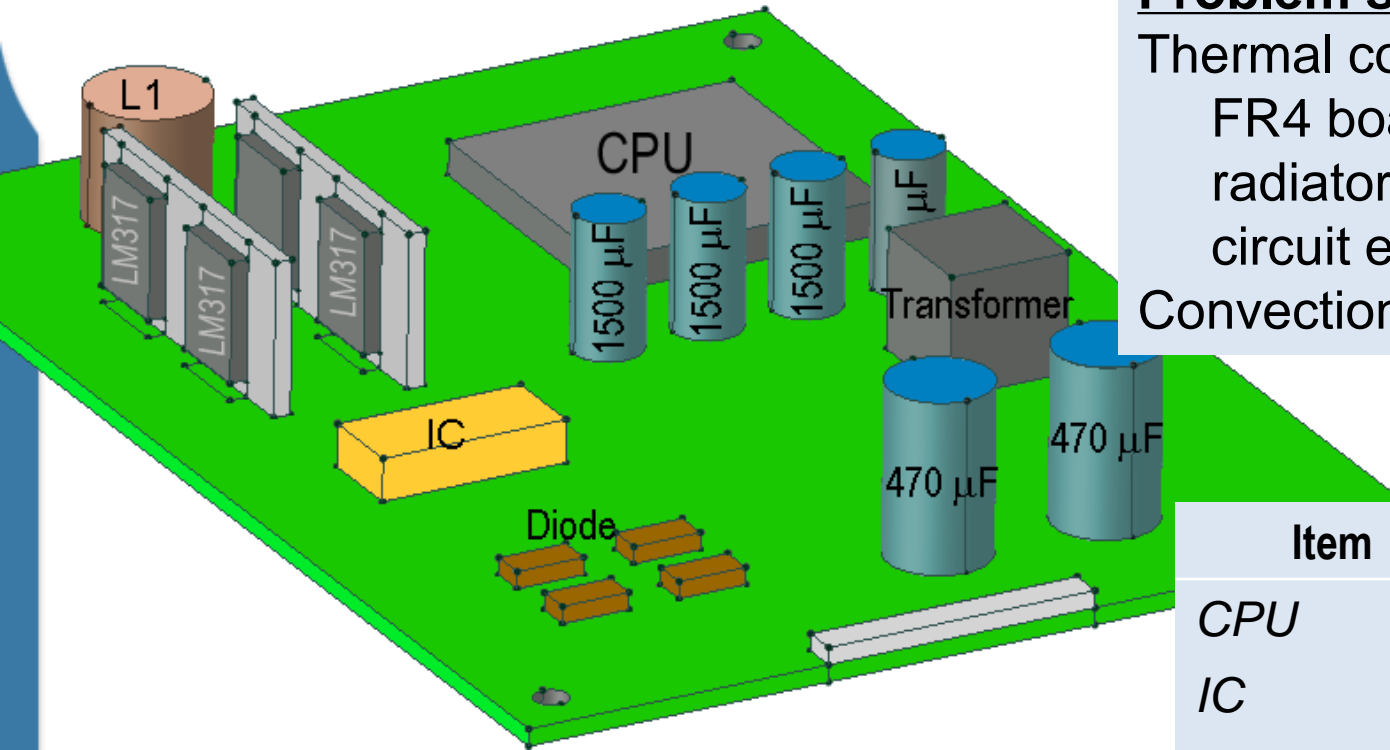

Thermal conductivity of  
AAC  $\lambda_1 = 0.7 \text{ W/K}\cdot\text{m}$ .  
insulation  $\lambda_2 = 0.04 \text{ W/K}\cdot\text{m}$ .  
brick  $\lambda_3 = 1.0 \text{ W/K}\cdot\text{m}$ .  
concrete slab  $\lambda_4 = 2.5 \text{ W/K}\cdot\text{m}$ .  
plaster  $\lambda_5 = 1 \text{ W/K}\cdot\text{m}$ .

### Task:

Temperature distribution

# PCB thermal analysis

## Problem specification:

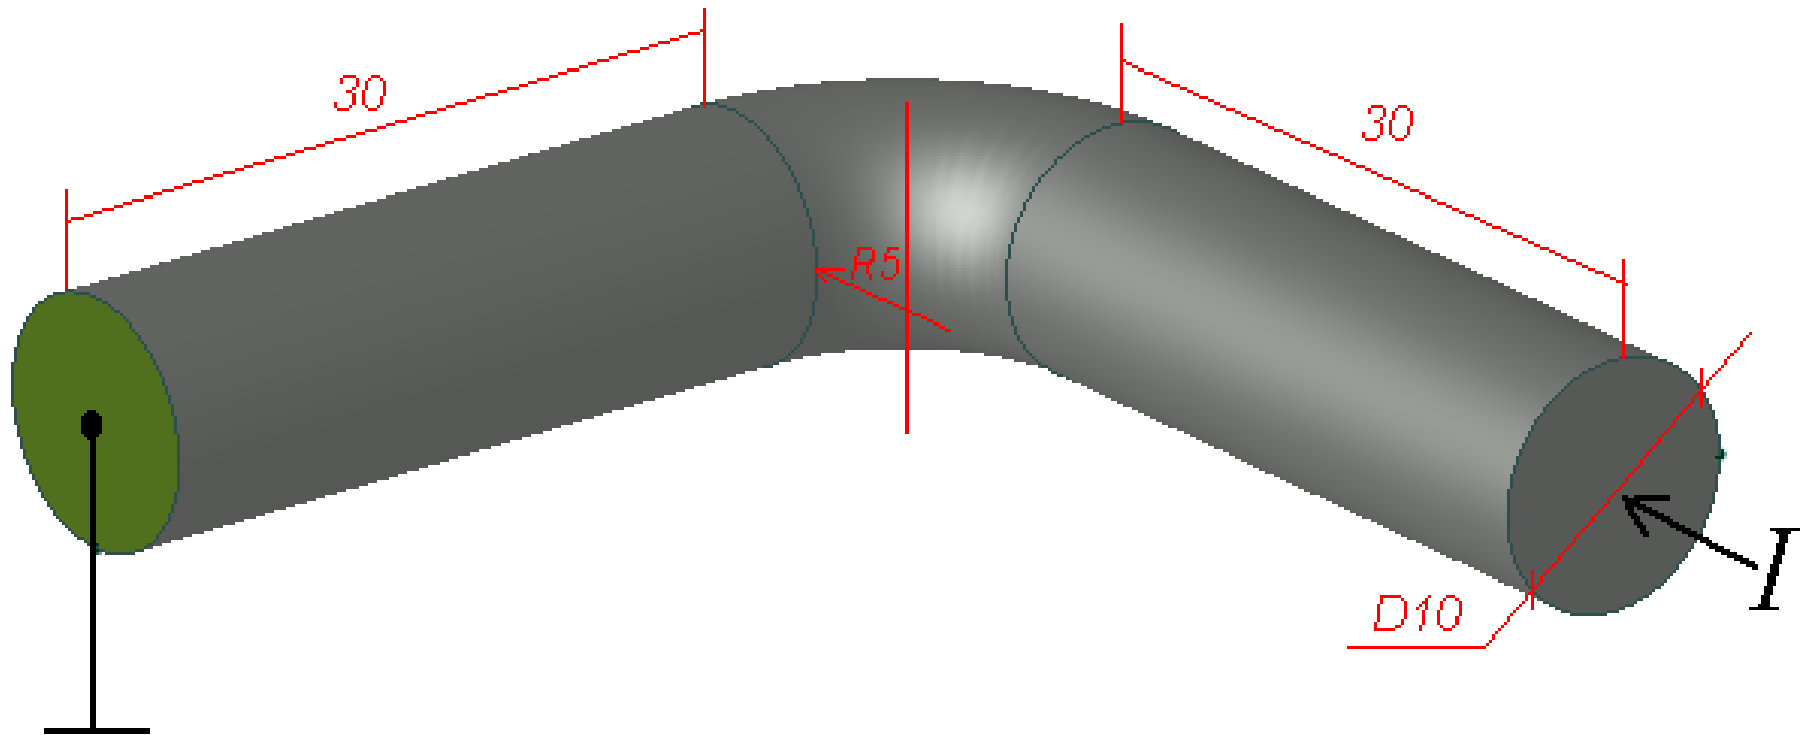

Thermal conductivity of  
FR4 board  $\lambda = 0.25 \text{ W/K}\cdot\text{m}$ ;  
radiator  $\lambda = 200 \text{ W/K}\cdot\text{m}$ ;  
circuit elements  $\lambda = 1 \text{ W/K}\cdot\text{m}$ ;  
Convection coefficient  $\alpha = 12 \text{ W/K}\cdot\text{m}^2$

## Task:

Calculate temperature  
distribution

Item	Loss [W]	Volume [cm <sup>3</sup> ]
<i>CPU</i>	2.5	4.62
<i>IC</i>	0.5	1.1
<i>LM317</i>	0.5	0.28
<i>470 uF</i>	0.2	2.26
<i>1500 uF</i>	0.15	0.8
<i>Transformer</i>	0.4	2.74
<i>Diode</i>	0.1	0.064
<i>L1</i>	0.1	2.08

# Bent copper wire resistance

## Problem specification:

Copper electric conductivity  
 $\sigma = 56e6$  S/m.

Current  $I = 100$  A

## Task:

Calculate resistance.

$$R = \Delta V / I \text{ [Ohm]}$$
